

Electricity Pricing [\$] - Weighted by Fossil Energy share (factor = 20)

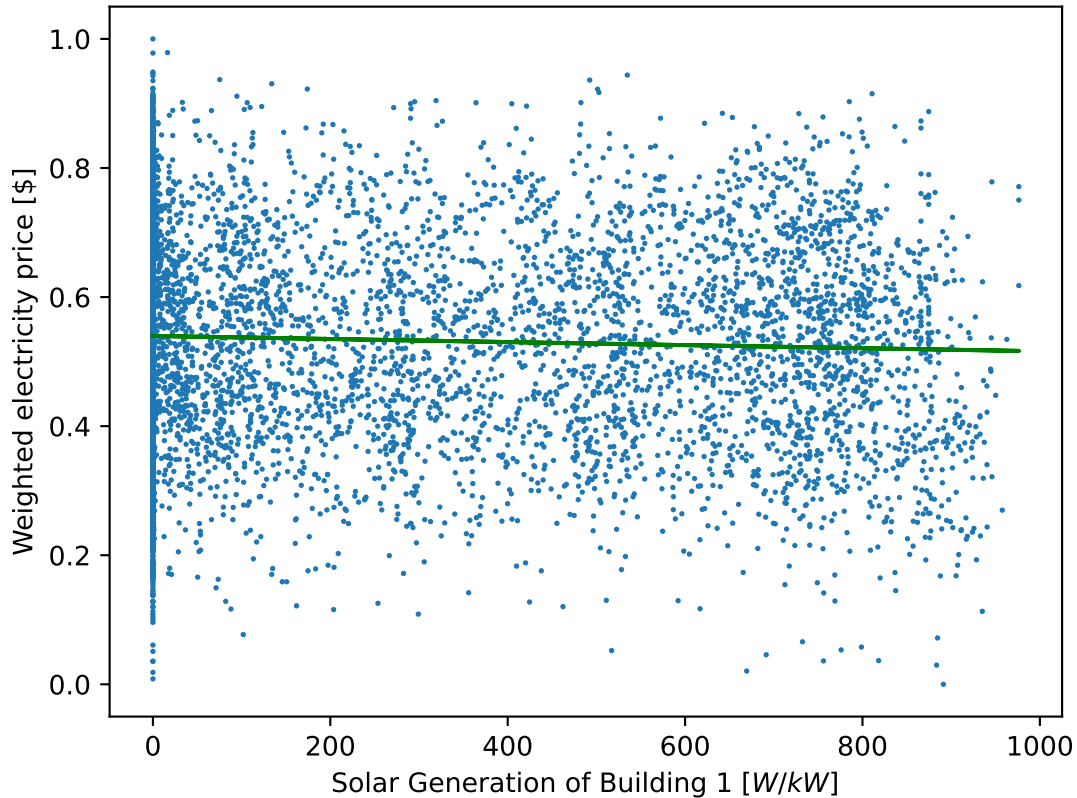

The chart displays two data series over time. The blue line, 'Prices influenced by fossil energy', starts at a moderate level, fluctuates, and then shows a strong upward trend starting around the middle of the timeline, reaching the highest point by the end. The orange line, 'Old prices', remains at a baseline for most of the period but features several sharp, vertical spikes of varying heights, indicating sudden price increases that are not reflected in the blue line's trend.
